

**Industrial Process Control & Monitoring** 

- Excellent long term stability and low drift
- Measurement inherently fails high if sensor damaged (no false zero)
- LOD = 0.5 ppm O<sub>2</sub> gas phase
- No membranes to foul; No electrolytes to poison; No consumption of O<sub>2</sub>
- Hazardous area approvals: FM, CSA, ATEX, UL and CE
- No cross-sensitivity or damage caused by: CO<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, NO<sub>2</sub>, heavy metals, ethanol, methanol or ionic species pH, S<sub>2</sub>, SO<sub>4</sub><sup>2-</sup>, Cl<sup>-</sup>, salinity or turbidity
- Measurement independent of flow velocity

The 4401OXY analyzer optically measures oxygen in either the gas or liquid phase by utilizing quench luminescence of an oxygen specific luminophore.

The analyzer is suitable for direct field installation (NEMA 4X) in hazardous area (Class I, Division 2). The optical fiber sensor platform allows small inline sensors to be installed into sample tubing lines (1/4"), flow cells using NPT fittings, or directly into tanks or process lines using our retractable "hot tap" sensor design. BOS optical oxygen sensors are impervious to typical O<sub>2</sub> poisons (H<sub>2</sub>S) and interferences (combustibles, magnetic, CO<sub>2</sub> and H<sub>2</sub>) with high accuracy and long-term stability measurements without the need for complex or advanced sample conditioning systems. The threaded version of the optical sensor has optional Dual Seal (ANSI/ISA 12.27.01) classification for high pressure applications up to 1200 PSIG (82.7 BAR).

The analyzer display and output units can be setup in either partial pressure (hPA or Torr) or in concentration (ppm or %  $O_2$ ) for the gas phases along with hPa, ppm or ppb for dissolved oxygen in liquid phase.

#### Typical Applications - Gas Phase (g)

- O₂ in hydrocarbon streams
- O<sub>2</sub> detection in nitrogen headers
- O, in process streams
- O, in nitrogen tank blanketing
- Trace level oxygen in flare gas

Limit of Detection: 0.5 ppm O<sub>2</sub> @ 1atm, 20°C (0.0005 hPa)

#### Typical Applications - Liquid Phase (1)

- High pressure produced water Dissolved O<sub>2</sub>
- ppb dissolved O<sub>2</sub> for waterflood injection
- Oxygen in methanol and ethanol
- Oxygen in oils
- Dissolved O<sub>2</sub> in liquid process streams
- Dissolved O<sub>2</sub> in product streams

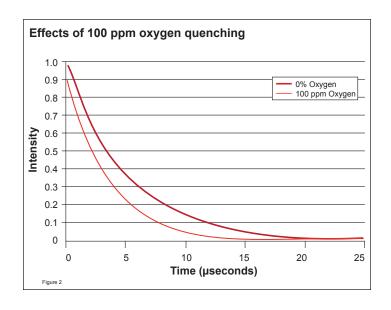

Limit of Detection: 1 ppb Dissolved O,

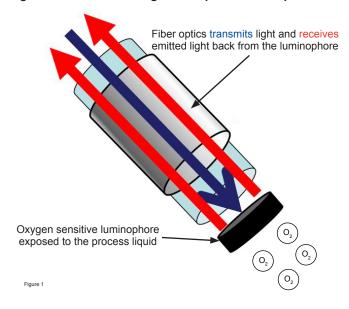

#### **Principle of Operation**

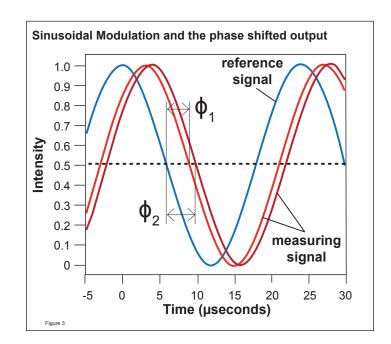

The 4401 OXY is a phase fluorometric analyzer that utilizes phase modulation to evaluate the luminescent decay time of an oxygen specific luminophore to calculate oxygen concentration. The sensor comprises of a small luminophore embedded in a polymeric matrix at the end of a fiber optic cable allowing for an extremely sensitive and accurate measurement of the partial pressure of oxygen that is applicable in both gas phase and liquid phase.

The analyzer uses an LED to emit blue light through fiber optic cable down the sensor tip [Fig 1]. The sensor tip contains the luminophore which absorbs the energy and rises to an excited state. In the absence of oxygen the excited luminophore will fall back to its ground state at a specific rate and in the process emits a red shifted light which is transmitted to the analyzer (spectrometer) via the optic cable where it is detected by a photomultiplier tube. When oxygen is present it quenches the fluorescence at a rate proportional to the oxygen concentration [Fig 2.]. The phase shift between the excitation source and the fluorescent signal is measured and the oxygen concentration is calculated [Fig 3].

#### Light transmission through fiber optic to luminophore

	4401OXY Oxygen Analyzer Specifications					
Part Numbers (Ordering Information)						
4401OXY	Oxygen Analyzer with 100-240VAC Operational Power, FM / CSA Approval					
4401OXY-CE	Oxygen Analyzer with 100-240VAC Operational Power, ATEX / CE Approval					
4401OXY-DC	Oxygen Analyzer with 9-24VDC* Operational Power, FM / CSA Approval					
4401OXY-DC-CE	Oxygen Analyzer with 9-24VDC* Operational Power, ATEX / CE Approval					
Input Information						
Sensor Input	(1) O <sub>2</sub> optical input BOS1, BOS2 or BOS3 sensor (SMA connector), (1) PT1000 input					
Digital Interface						
Analog Outputs	(2) Programmable voltage outputs with galvanic isolation, 0 to 10 V (2) Programmable current outputs with galvanic isolation, 4 to 20 mA					
Sampling Rate	Programmable from 3 seconds to 1 hour					
User Adjustable Options						
Units: User Selectable	Gas Phase: % air-saturation, % oxygen, hPa, Torr, ppm. Liquid Phase: hPa, Torr, ppm, ppb, µmol					
Calibration	Conventional two-point calibration					
Environmental						
Environmental Rating	NEMA 4X					
Operating Temperature	0 to +50°C (32 to 122°F)					
Storage Temperature	-10 to +65°C (14 to 149°F)					
Max. Operating Relative Humidity	95%					
Physical	Physical					
Dimensions H x W x D (Inches)	8.4 x 10 x 8.4 inches (21.3 x 25.4 x 21.3 cm)					
Weight (lb)	13.7 lb (6.2 kg)					
Power Supply						
Power	100-240 VAC, 50/60Hz or 9-24 VDC*					

<sup>\*</sup> Input power must not exceed 24VDC

### **Analyzer Dimensions**

### **BOS Optical Oxygen Sensor Family**

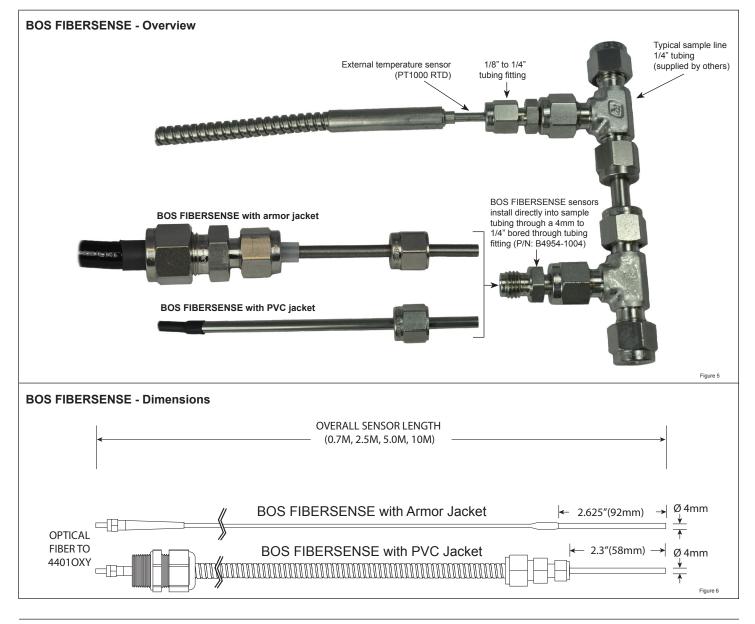

The BOS optical sensors are available in three installation styles:

- BOS FIBERSENSE 4mm sensor for small tubing installations
- BOS FLEXSENSE Threaded sensor with removable luminophore sensor cap
- BOS SAFETAP Retractable "hot tap" sensor

All three sensor styles can be built in any measurement range (BOS1, BOS2, BOS3).

#### **BOS FIBERSENSE Optical Oxygen Sensors**

The BOS FIBERSENSE is a 4mm wand-style optical oxygen sensor that offers high precision in a small package. The small sensing tip can be installed directly into a tube fittings which makes it the ideal choice for oxygen measurement on sample line installations. The fiber optic tip is encased in a stainless steel wand and can be supplied bare or with optional armored conduit (figure 5 & 6). The BOS FIBERSENSE product is commonly used in gas phase sample line installations. An external temperature sensor is required for compensation.

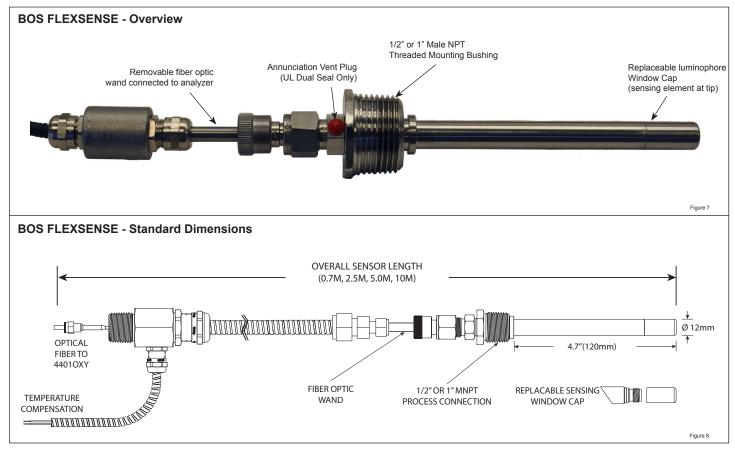

#### **BOS FLEXSENSE Optical Oxygen Sensors**

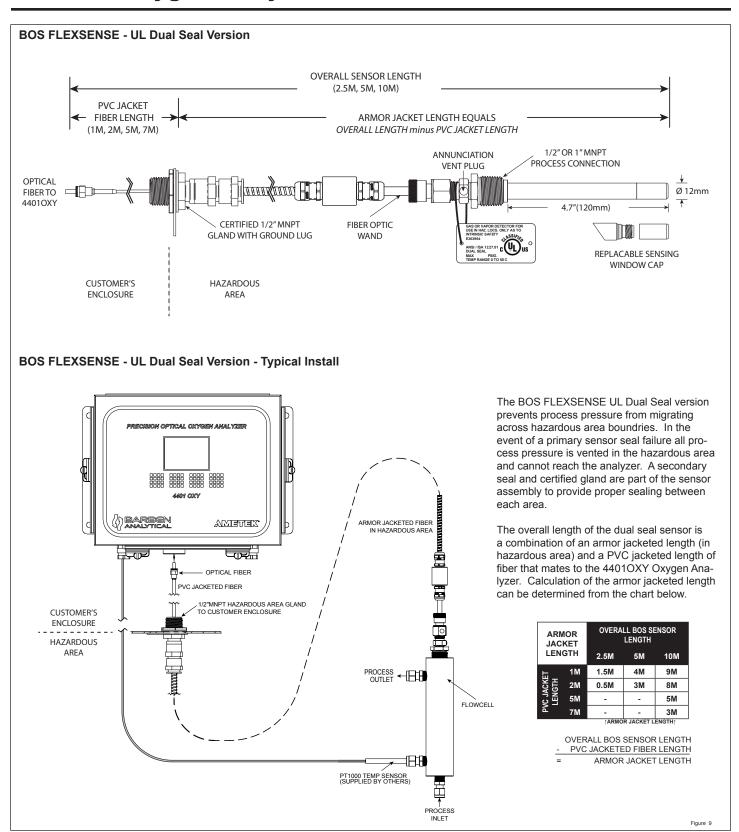

The BOS FLEXSENSE is our most versatile optical oxygen sensor. The sensor is based on the DIN 19263 dimensions commonly used with pH and conductivity sensors. 1/2" and 1" Male NPT connections make this sensor best suited for flowcell installations where frequent access to the sensor is required. Oxygen measurement is accomplished through a replaceable luminophore sensing cap. A removable fiber optic wand is used to transmit the optical signal to/from the window. The BOS FLEXSENSE

is rated for pressures up to 1,200 PSIG making it well suited for applications such as produced water. The BOS FLEXSENSE can be specified with ANSI/ISA 12.27.01 Dual Seal Certification (figure 9 & 10). This design is specified when the distance between the oxygen analyzer and the measurement point crosses different hazardous zones. If this option is specified, then a separate direct contact temperature sensor should be installed.

	BOS FIBERSENSE Optical Oxygen Sensor Specifications			
Pressure Rating 30 PSIG (2.1 Bar) Maximum Pressure				
Temperature Rating	0 to 50°C (32 to 122°F) Operating, 90°C (194°F) non-continuous			
	BOS FLEXSENSE Optical Oxygen Sensor Specifications			
Pressure Rating 1200 PSIG (82.7 Bar) for BOS1 & BOS2 sensing caps, 800 PSIG (55.1 Bar) for BOS3 sensing				
Temperature Rating	0 to 50°C (32 to 122°F) operating, 90°C (194°F) non-continuous			
Body Materials	316 Stainless Steel, Titanium, Hastelloy C-276			
Internal Seal Options Viton, EPDM, FFKM (Kalrez)				

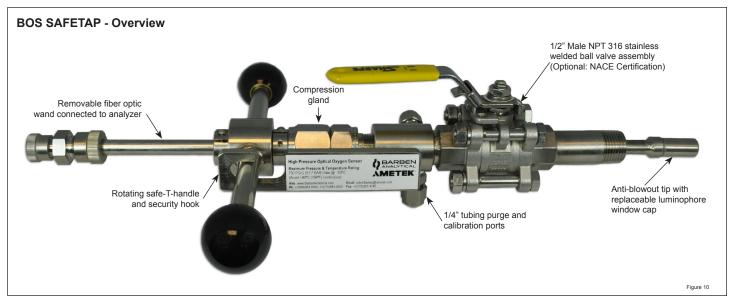

#### **BOS SAFETAP Retractable Optical Oxygen Sensors**

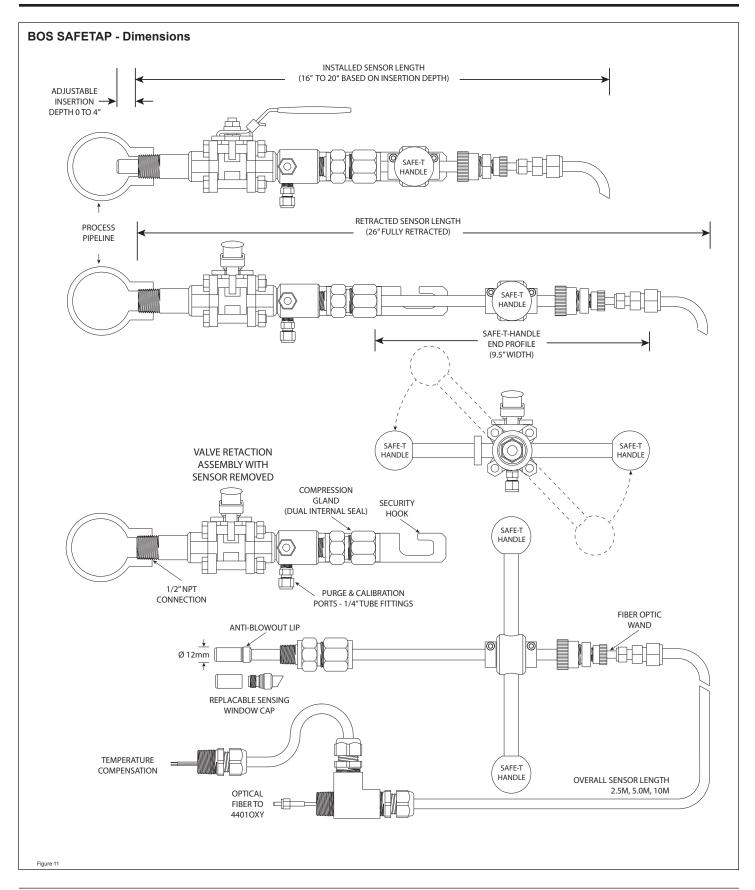

Often oxygen measurement on external sample lines are not feasible. For in-line applications Barben Analytical offers the BOS SAFETAP retractable optical oxygen sensors. The BOS SAFETAP is designed to manually insert and retract (hot tap) from the process through a ball valve assembly. The free rotating safe-T-handle provides a secure gripping surface to manually insert the optical sensor into applications up to 450 PSIG. The BOS SAFETAP includes a security hook that catches the safe-T-handle to prevent unintended retraction. An additional compression gland using proven Conax® sealing technology provide additional insurance against unintended retraction.

In normal operation the BOS SAFETAP is rated up to pressures of 750 PSIG (51.7 Bar). When sensor calibration or replacement is required the removable luminophore tip can be retracted through the ball valve which is used to isolate the sensor from the process. Tubing ports are included as part of the welded retraction housing so that purge and complete insitu calibration can be performed without removal of the oxygen sensor. The BOS SAFETAP oxygen sensor includes an integral PT100 RTD temperature sensor and replaceable luminophore window cap so that sensor service is simple and low cost.

BOS SAFETAP Retractable Optical Oxygen Sensor Specifications				
Valve Options	316 stainless ball valve W.O.G., Optional 29" Hg full vacuum NACE MR0175 certified ball valve			
Operating Pressure Rating	750 PSIG (51.7 Bar)			
Insertion / Retraction Pressure Rating	450 PSIG (31.0 Bar)			
Temperature Rating	0 to 50°C (32 to 122°F) operating, 90°C (194°F) non-continuous			
Internal Seal Options	Viton, EPDM, FFKM (Kalrez)			

### **BOS Range Specifications For All Products**

BOS1 Gas or Liquid					
	Dissolved Oxygen	Gaseous & Dissolved Oxygen @ 1atm, 20°C			
Measurement Range	0 - 1.8 mg/L (ppm)	0 - 4.2 % O <sub>2</sub> 0 - 41.4 hPa			
Limit of Detection	1 ppb dissolved oxygen	0.002 % O <sub>2</sub>			
Resolution @ 20°C and 1013 hPa	± 0.30 at 1 μg/L (ppb) ± 0.41 at 10 μg/L (ppb) ± 0.63 at 200 μg/L (ppb)	± 0.0007 % O <sub>2</sub> at 0.002 % O <sub>2</sub> ± 0.007 hPa at 0.023 hPa ± 0.0015 % O <sub>2</sub> at 0.02 % O <sub>2</sub> ± 0.015 hPa at 2.0 hPa			
Response Time (T <sub>90</sub> )	< 30 sec.	< 6 sec.			
Accuracy @ 20°C	1 ppb (I), 0.002 % O <sub>2</sub> (g), or 3% of	the measured value whichever is greater			
Drift from Photodecomposition	< 2.0 ppb within 30 days (1 min sa	mple rate)			
Operating Temperature Range	0 to 50°C (32 to 122°F)				
Allowable Sensor Temperature	90°C (194°F) non-continuous				
	BOS2 Gas or	Liquid			
	Dissolved Oxygen	Gaseous & Dissolved Oxygen @ 1atm, 20°C			
Measurement Range	0 - 22 mg/L (ppm)	0 - 25 % O <sub>2</sub> 0 - 250 hPa			
Limit of Detection (LOD)	15 ppb dissolved oxygen	0.03 % O <sub>2</sub>			
Resolution @ 20°C and 1013 hPa	± 4.5 at 90 μg/L (ppb) ± 45 at 9060 μg/L (ppb) ± 0.15 at 23 mg/L (ppm)	± 0.01 % O <sub>2</sub> at 0.21 % O <sub>2</sub> ± 0.1 hPa at 2 hPa ± 0.1 % O <sub>2</sub> at 20.9 % O <sub>2</sub> ± 1 hPa at 207 hPa			
Response Time (T <sub>90</sub> )	< 30 sec.	< 6 sec.			
Accuracy @ 20°C	± 0.4 % O <sub>2</sub> at 20.9 % O <sub>2</sub> , ± 0.05 %	O <sub>2</sub> at 0.5 % O <sub>2</sub>			
Drift from Photodecomposition	< 0.03 % O <sub>2</sub> within 30 days (1 min	sample rate)			
Operating Temperature Range	0 to 50°C (32 to 122°F)				
Allowable Sensor Temperature	90°C (194°F) non-continuous				
	BOS3 - Gas Pha	ase Only			
	G	as Phase Oxygen Only @ 1atm, 20°C			
Measurement Range	0 - 300 ppm with over-range of 10	00 ppm			
Limit of Detection (LOD)	0.5 ppm O <sub>2</sub>				
Resolution @ 20°C & 1013 hPa	10 ± 0.5 ppm; 100 ± 0.8 ppm; 2	200 ± 1.5 ppm			
Response Time (T <sub>90</sub> )	< 3 sec. based on 0 - 300 ppm me	asurement range			
Accuracy @ 20°C	± 2ppm or ± 5% of measured value whichever is greater (or as partial pressure, +/- 0.002 hPa)				
Drift from Photodecomposition	< 2.0 ppm within 30 days (1 min sample rate)				
Operating Temperature Range	0 to 50°C (32 to 122°F)				
	1				

#### Cross Sensitivity for BOS1, BOS2, BOS3 Sensors Listed above

90°C (194°F) non-continuous

No cross-sensitivity for carbon dioxide  $(CO_2)$ , hydrogen sulfide  $(H_2S)$ , ammonia  $(NH_3)$ , gaseous sulfur dioxide  $(SO_2)$ , no cross-sensitivity to pH (1-14), ionic species like sulfide, sulfate or chloride. Usable in methanol, ethanol-water mixtures, and in pure methanol & ethanol. Avoid organic solvents like chloroform, toluene, acetone, and methylene chloride along with any gaseous chlorine  $(CI_2)$ .

### SCP Oxygen Sample Calibration Panel - Gas Phase

The SCP Sample Calibration Panel [Fig. 12] provides an easy, pre-engineered solution for gas phase applications. All related tubing, flow meters, valves, and gauges come pre-installed on the SCP panel. Specify the the panel, analyzer, BOS sensor, and RTD to get up and running quickly.

#### **Features**

- Manual calibration without removing sensor
- Fast loop 10 LPM max (total capacity of 12 LPM)
- Filters: particulate (0.5μm) & coelescing (0.3μm)
- Inlet pressure regulation (Max. inlet 300 PSIG)
- 304 stainless steel mounting panel

SCP - Sample Calibration Panel Specifications					
Part Numbers	Applications				
SCP-CT	Designed for dry gas applications Specify with 44010XY, BOS FIBERSENSE (0.7m) and B1150-1005 RTD				
SCP-CF	Use in wet gas applications or when ease of tip replacement is required Specify with 44010XY, BOS FLEXSENSE (2.5m) and B1150-1005 RTD.				
Physical					
Dimensions H x W x D	24.5 x 16.5 x 6.33 inches (62.3.8 x 41.9 x 16.4 cm) Note - Split panel design provides some mounting flexibility				
Weight (lb)	39 lb (17.7 kg) when supplied with sensors and analyzer.				
Process Connections	1/4" Tubing for Sample Inlet and Calibration Gases. 3/8" Tubing for Drain and Sample Outlet.				
Sample	Gas phase, Sample Inlet 300 PSIG (20 BAR) @ 100°C (Note - Sensor Max. 90°C (194°F) non-continuous)				
Accessories					
B5106-1018	Liquid Drain Option. Provides sight window for manual drain in high moisture applications.
